

Homework 3

- 1) Create a C++ program that asks the user for a decimal and then outputs the decimal portion.
For example, if the user enters 2.78, the program outputs 0.78.
- 2) Create a C++ program that asks the user for a decimal and then returns the two integers which the decimal number falls between.
For example, if the user enters 2.78, the program outputs 2 and 3. if the user enters 3.0, the program outputs 3 and 4.

Please upload your code in a file with your name and class Id in the name of the file.
