

- An identifier cannot be a C++ keyword. Keywords have predefined special meanings to the compiler.
- It cannot have two consecutive underscores.
- It can be a combination of numbers, letters, connectors, and Unicode characters.
- It must start with a letter of the alphabet or an underscore, not a number.
- It should not include white space.
- It cannot have more than 511 characters.
- It has to be declared before it is referred.
- Two identifiers cannot have the same name.
- Identifiers are case sensitive
